

Dataset and purpose of visualisation

Using the IMDB movie dataset provided at <https://data.world/data-society/imdb-5000-movie-dataset>, I have created the following vis using D3:

Movie counts for each country

Movie counts for each country

This vis shows the movie-production counts for each country upon country-specific mouse-hover. Bottom is the visualisation when doing mouse-hover.

Key elements: pop-up upon mouse hover, world map, color palette
